SILICON NITRIDE IGNITERS

**Longer Lasting
Extreme Durability
Consistent Quality**

Hot Surface Ignition

UPGRADE

Now More Robust!

Old

The current Igniter (Silicon Carbide) is delicate and has a potential to break easily.

Current igniter is large and may be difficult to maneuver, mount, and change out.

Natural flaws, oil from fingers, or small chips may lead to premature cracks and failures.

VS

New

Silicon Nitride is robust, so much so it can be knocked on a table and it won't break

Igniter is compact and easy to mount with a single screw.

Silicon Nitride is naturally more consistent and strong, without the flaws of other igniters.
