

L.B. White Co. Announces Issuance of US Patent for their Oval 80 Radiant Heater with its unique design

FOR IMMEDIATE RELEASE

June 22, 2016 – Onalaska, WI – L.B. White Company, a leading global manufacturer of agricultural heating solutions, announced that the United States Patent and Trademark Office has issued U.S. Patent No. 9,303,880, covering their Oval 80 radiant heater for poultry applications. The heater has a unique, evenly spread heat pattern providing consistent warmth for birds.

The Oval 80 Radiant heater is similar to common tube heaters, but performs better as it forces the flame from a three inch tube into an Oval tube, creating a more consistent and efficient heat pattern. Tube type heaters work well in poultry houses because they draw fresh air for combustion from outside the growing area, not dirty, caustic house air. Components stay clean and they are practically maintenance free. The Oval 80 has the access door and diagnostic lights on the bottom of the burner box to allow easy access to components and allow easy visibility from the entire house. The Oval 80 ceiling temperatures remain cooler than competitive units, meaning more heat energy is going to the ground, and a safer environment within the building.

According to Chris Smith, Director of Marketing for L.B. White, “Tube heaters combine the best of forced air and radiant heating, and the Oval 80’s unique way of utilizing the tube to radiate an even heat pattern makes it one of the best heating solutions for poultry houses today. We have produced great results with the Oval 80 in both chicken and turkey applications.”
